## Macroeconomics

This is the workbook, which has been revised once again. Exercises with extensive solutions deepen the tasks presented in the textbook "Foundations and Problems of Economics". About 30 questions on topics including micro- and macro-economics, finance, foreign trade and economic policy are answered. Hence, the exercise book covers all economic models for the basic course of studies. The topics of the European Union, fiscal policy and national accounts have been largely revised in the fifth edition. Thanks to extensive hints to solutions, it is also very well suited to individual study.

### About the Authors:

Prof. Dr. Ulrich Baßeler, Institute for Economic Theory, Free University of Berlin; Prof. Dr. Jürgen Heinrich, Institute for Journalism, University of Dortmund; Prof. Dr. Burkhard Utecht, Thüringen Berufsakademie, Eisenach

### Key Features:

- More than 200,000 copies of the textbook sold
- Covering all current models
- Optimally adapted to the textbook
- Including the relevant calculation formulas
